AI from Above — The Internet Health Report 2022 | Mozilla

By IRL Podcast
August 16, 2022

An aerial picture can tell a thousand stories. But *who* gets to tell them? From above the clouds, our world is surveilled and datafied. Those who control the data, control the narratives. We explore the legacy of spatial apartheid in South Africa's townships, and hear from people around the world who are reclaiming power over their own maps.

Raesetje Sefala is mapping the legacy of spatial apartheid in South Africa as a research fellow with the Distributed AI Research Institute (DAIR) founded by Timnit Gebru.

Astha Kapoor researches how communities and organizations can be 'stewards' of data about people and places as co-founder of the Aapti Institute in India.

Michael Running Wolf is the founder of Indigenous in AI working on speech recognition and immersive spatial experiences with augmented and virtual reality in Canada.

Denise McKenzie is a location data expert who works with the global mapping organization PLACE to empower governments and communities to use advanced spatial data.
