## To Advance Digital Security, Advocates Should Look to the Climate Movement | Tech Policy **Press**

By Ann Cleaveland August 16, 2022

The costs of events such as the SolarWinds hack, the Colonial Pipeline ransomware attack, and countless other hacks and breaches continue to mount, yet cybersecurity largely remains the domain hav of technical experts. To make progress on the critical digital security problems of the next decade, cybersecurity will need to garner broader appeal. But where is the social movement that will reshape rea cybersecurity?
