

Cyber Insecurity in Healthcare: Cost & Impact on Patient Care | Proofpoint US

By New Ponemon Report

September 15, 2022

Healthcare IT and security professionals have spoken. Ponemon listened. In this study sponsored by Proofpoint, Ponemon surveyed 641 people responsible for security strategies – including setting IT cybersecurity priorities, managing budgets and selecting vendors and contractors. The goal was to understand the cybersecurity threats targeting healthcare organizations and the cost of responding to attacks that can endanger patient safety and care delivery. The results are truly eye opening.
