ChatGPT will lead colleges to increase student surveillance. Here's how. | Slate

By Chris Gilliard, Pete Rorabaugh

March 2, 2023

In the classroom of the future—if there still are any—it's easy to imagine the endpoint of an arms race: an artificial intelligence that generates the day's lessons and prompts, a student-deployed A.I. that will surreptitiously do the assignment, and finally, a third-party A.I. that will determine if any of the pupils actually did the work with their own fingers and brain. Loop complete; no humans needed. If you were to take all the hype about ChatGPT at face value, this might feel inevitable. It's not.
